-----	---

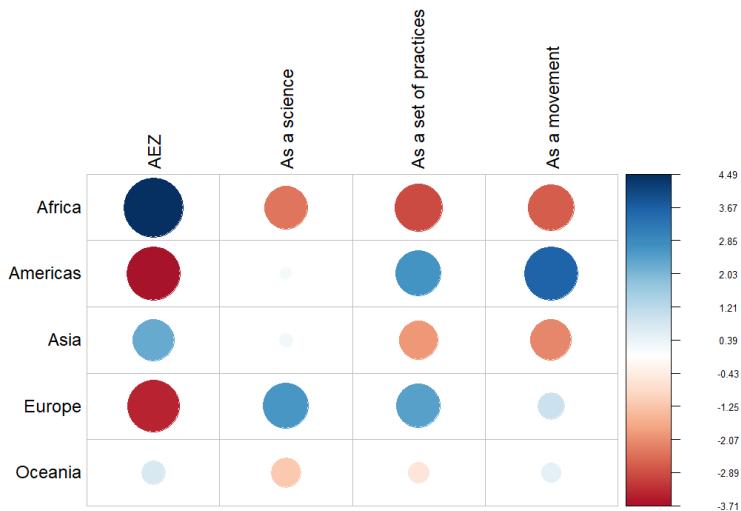

Figure 1-S. Graphic representation of residuals after a chi-square test between continental locations and agroecological type ($\chi^2 = 118.4$, df = 12, p-value < 2.2e-16). Blue circles represent a significant relationship between the two variables, while red circles represent a non-significant relation between the two variables.

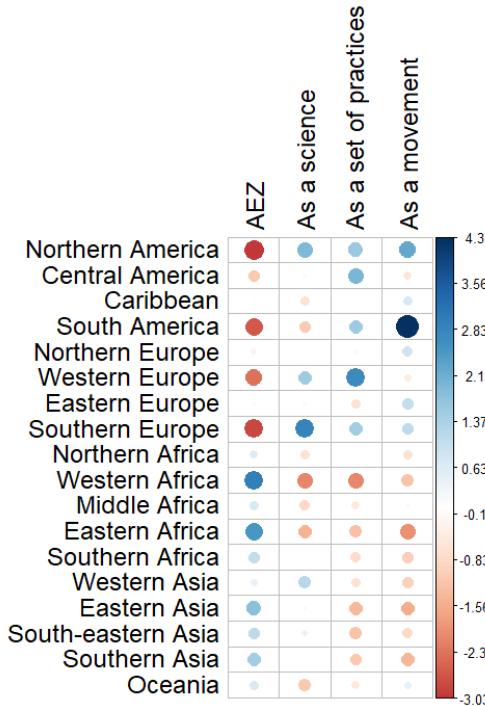

Figure 2-S. Graphic representation of residuals after a chi-square test between regional locations and agroecological type ($\chi^2 = 155.44$, df = 51, p-value = 1.72e-12). Blue circles represent a significant relationship between the two variables, while red circles represent a non-significant relation between the two variables.

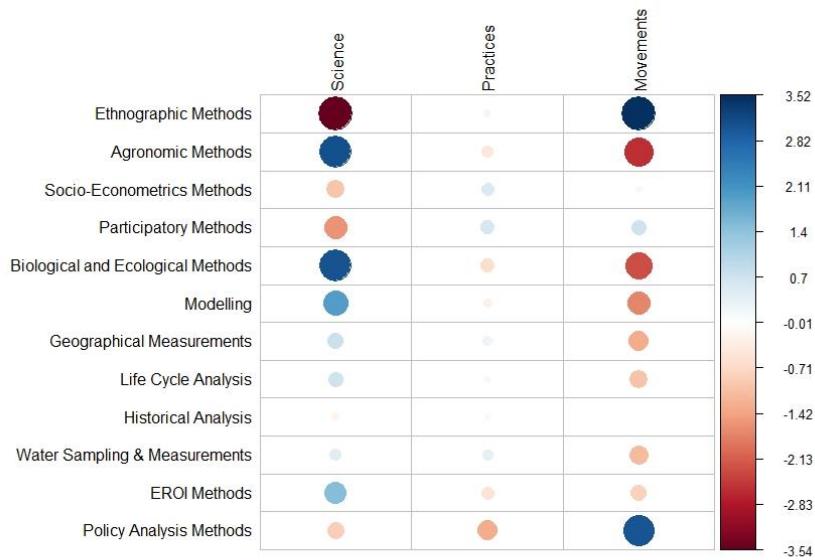

Figure 3-S. Graphic representation of residuals after a chi-square test between type of methods applied and scale of agroecology ($\chi^2 = 88.262$, $df = 22$, $p\text{-value} = 6.76e-10$). Blue circles represent a significant relationship between the two variables, while red circles represent a non-significant relation between the two variables.
