

Supplemental Figure 1. Densities of calbindin D-28k-positive granular neurons and calbindin D-28k-negative Hoechst-stained cells in the dentate gyrus of the dorsal and ventral hippocampi in ferrets on postnatal day 20. (A) Calbindin D-28k-positive granular neuron density in the granular layer. (B) Calbindin D-28k-negative Hoechst-stained cells in the subgranular layer.
