

Supplementary Material

Supplementary Figure 1 – Medium does not affect intrinsic ZIKV infectiosity

A vial of the African HD78788 ZIKV was diluted in either DMEM, or EndoGRO, or EBM-2 for 2 h and was used to infect hCMEC/D3 cells. After viral adsorption (2h long), hCMEC/D3 cells were washed and cultured for 48 h. Viral infection and replication was then quantified RT-qPCR ($n = 3$ independent experiments, $P > 0.05$ [Kruskal-Wallis test, Dunn's *post-hoc*]).

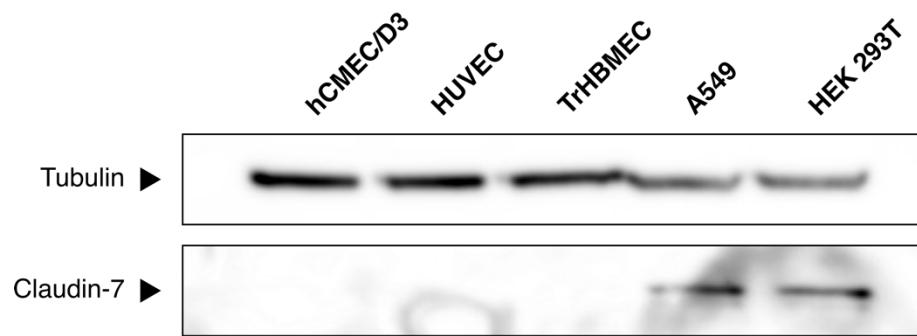

Each experiment was performed in triplicate. Data are presented as mean \pm SEM. ns, $P > 0.05$ (post-hoc corrected P-value).

Supplementary Figure 2 – Culture medium prior to infection affects ZIKV susceptibility of hCMEC/D3 cells

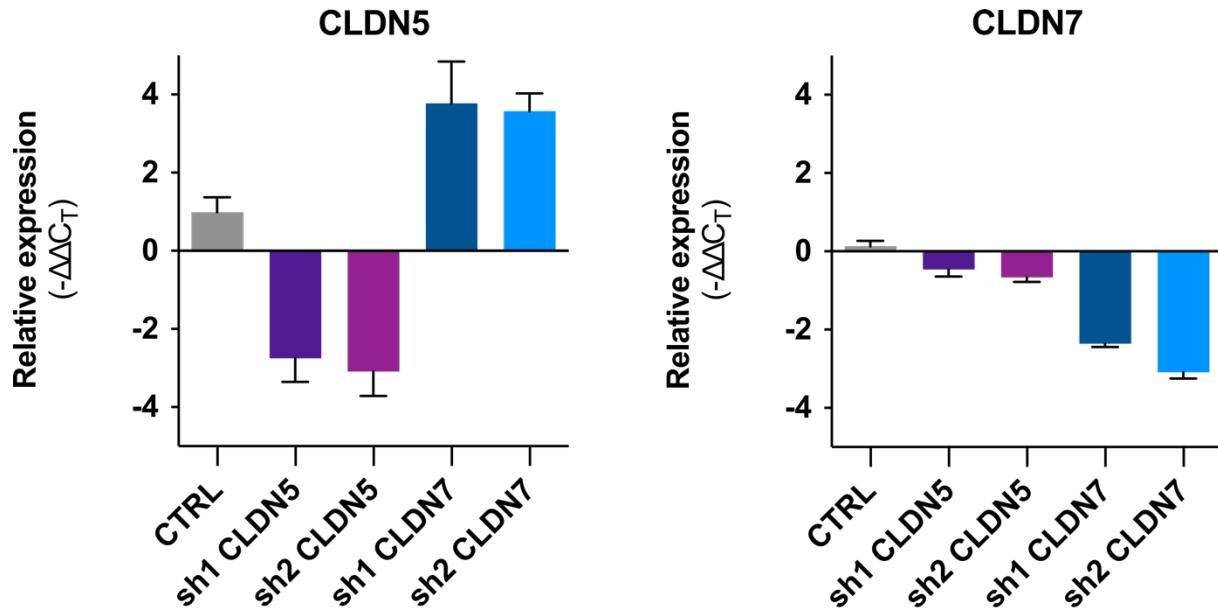

hCMEC/D3 cells were cultured in EndoGRO or EBM-2 and infected with ZIKV (African HD78788 strain) resuspended in DMEM. After adsorption, the cells were kept in DMEM for 48 h. The supernatant was collected and the viral titer was quantified by plaque assay ($n = 3$ independent experiments, [Mann-Whitney t-test]).

Each experiment was performed in triplicate. Data are presented as mean \pm SEM. ** $P \leq 0.01$.

Supplementary Figure 3 – Claudin-7 expression in different cell lines

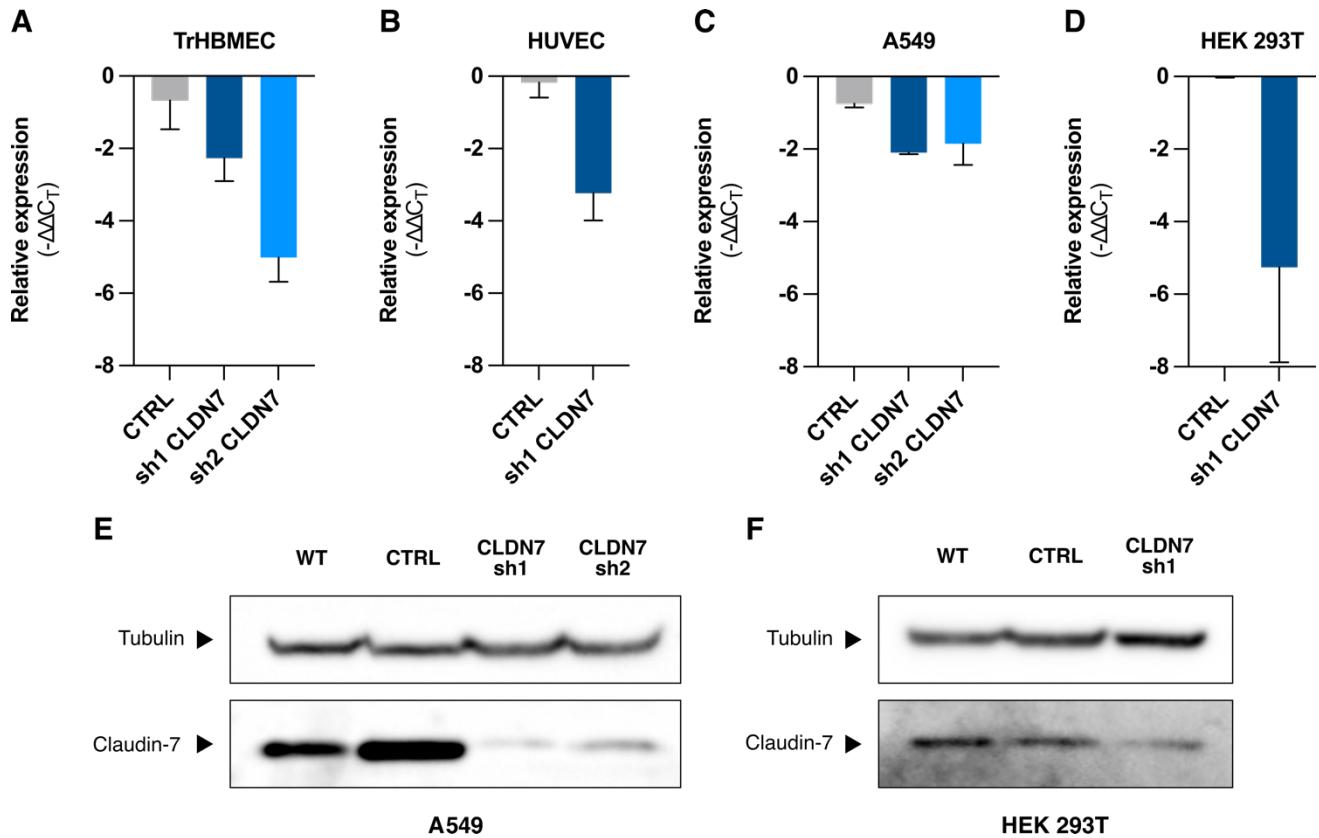

Western blot analysis of claudin-7 expression in several endothelial (hCMEC/D3, HUVEC and TrHBMEC, all cultivated in EndoGRO) and epithelial (A549, HEK 293T) cells. α -Tubulin serves as loading control.

Supplementary Figure 4 – Knockdown efficiency in hCMEC/D3 cells

Differential mRNA levels for CLDN5 (left) and CLDN7 (right) through RT-qPCR in hCMEC/D3 cells transduced with shRNA targeting CLDN5 and CLDN7 transcripts or non-targeting (CTRL) relative to non-transduced cells ($n = 3$ independent experiments).

Each experiment was performed in triplicate. Data are presented as mean \pm SEM.

Supplementary Figure 5 – Knockdown efficiency in TrHBMEC, HUVEC, A549 and HEK 293T cells

(A) Differential mRNA levels for CLDN7 through RT-qPCR in TrHBMEC cells transduced with shRNA relative to non-transduced cells (n = 3 independent experiments).

(B) Differential mRNA levels for CLDN7 through RT-qPCR in HUVEC cells transduced with shRNA relative to non-transduced cells (n = 3 independent experiments).

(C) Differential mRNA levels for CLDN7 through RT-qPCR in A549 cells transduced with shRNA relative to non-transduced cells (n = 3 independent experiments).

(D) Differential mRNA levels for CLDN7 through RT-qPCR in HEK 293T cells transduced with shRNA relative to non-transduced cells (n = 3 independent experiments).

(E) Western blot analysis of claudin-7 expression in A549 cells transduced with shRNA. α -Tubulin serves as loading control.

(F) Western blot analysis of claudin-7 expression in HEK 293T cells transduced with shRNA. α -Tubulin serves as loading control.

Each experiment was performed in duplicate. Data are presented as mean \pm SEM.
