a. Variants minor allele frequencies from gnomAD_genome_EAS, gnomAD_exome_EAS and ExAC_EAS.

b. (The score of prediction software):(predictive results); D = Damaging; T = Tolerate.

c. variant were annotated by reported pathogenicity for LSDs, based on ClinVar (<https://www.ncbi.nlm.nih.gov/clinvar/>), as follows: B, benign; LB, likely benign; P, pathogenic; LP, likely pathogenic; CIP, conflicting interpretations of pathogenicity; US, uncertain significance. In some cases, it is noted if there is an alternative variant (p.X###Y) is established to be pathogenic at the same position, and other variants without documentation in ClinVar are indicated with a dash (-).

Supplementary Table 4. Rare damaging homozygous variants of LSD genes identified in patients from WES cohort and WGS cohort
