

Supplementary Material

Supplementary Figure 1. Average amplitude spectrum averaged across the 21 subjects and 25 trials for four stimuli frequencies at O1, Oz, and O2 channels. Red circles indicate the target frequencies and their harmonics.

Supplementary Table 1. Mean and standard deviations of the average classification accuracy across channel combination (ACA) across the subjects with respect to the SSVEP classification algorithm, number of channels, and window length.

Algorithm	Number of channels	Window length (s)						
		2	2.5	3	3.5	4	4.5	5

Values denote average (standard deviation) of the ACA across 21 subjects.

Supplementary Table 2. Mean and standard deviations of the robustness against the electrode shift (RES) across the subjects with respect to the SSVEP classification algorithm, number of channels, and window length.

Algorithm	Number of channels	Window length (s)
