

## Supplementary Material

**Supplementary Figure 1**

- (A) We transfect U87, A172 and SHG44 cells with GAS5-overexpression lentivirus or GAS5-shRNA lentivirus. Transfection efficiency is verified by the measurement of GAS5 expression level by qRT-PCR using GAPDH as a reference gene (n=3).
- (B) Scratch test show the healing ability of A172 and SHG44 glioma cells (n=3). Representative images and the ratio of healing area are shown (n=3).
- (C) Flow cytometric analysis of apoptosis in GAS5 knockdown and parental U87 cell lines (n=3).

**Supplementary Figure 2**

- (A) The images of cells extracted from patients.
- (B) The ratio of cells single-labeled CD133 is assessed by flow cytometry in GSCs-1 and GSCs-2.
- (C) The GSCs are induced into differentiation.
- (D) We transfect GSCs with GAS5 lentivirus. Transfection efficiency is verified by the measurement of GAS5 expression level by qRT-PCR using GAPDH as a reference gene (n=3).

**Supplementary Table 1: Sequences of primers used for qRT-PCR**
