

Supplementary Material

1 Comorbidities

According to the Composite International Diagnostic Interview (CIDI), all participants in the phobics group fulfilled the DSM-IV criteria for animal type phobia for spiders. Five of them fulfilled the criteria for one or two comorbid anxiety disorders (mostly other types of phobias, once agoraphobia and once panic-attacks). The slightly increased BDI and Composite International Diagnostic Screener (CID-S) scores in this group (see Supplementary Table 1) might indicate that there are a few participants who might have further mental comorbidities. All participants in the non-anxiety group were most likely free of mental disorders, as no diagnoses were made in the CIDI and BDI and CID-S scores were very low. See also Supplementary Table 2 for detailed numbers of diagnoses resulting from the CIDI (anxiety section only).

2 Supplementary Data

Supplementary Table 1. Overview of demographic data and questionnaires for each group. *M* = mean, *SD* = standard deviation

BDI: Beck-Depression Inventory II, TAI: Trait Anxiety, CID-S: Composite International Diagnostic Screener, SAS: Fear of Spiders Screening, RSES: Rosenberg's global Self-Esteem, SSQ: Simulator Sickness Questionnaire, PQ3: Presence Questionnaire 3, IPQ: iGroup Presence Questionnaire, BFI: Big Five Inventory, ASI: Anxiety Sensitivity Index 3, SSSV: Sensation Seeking Scales, FEE: assessment of disgust sensitivity, FKK: competence and locus of control, FSQ: Fear of Spider Questionnaire, IE4: Short Scale for the Assessment of Locus of Control

Supplementary Table 2. Comorbidities: The number of participants according to the number of anxiety diagnoses resulting from the CIDI.

	Number of participants			
	0 diagnosis	1 diagnosis	2 diagnoses	3 diagnoses
phobics	0	10	1	4
fearfuls	3	2	1	0
non-fearfuls	10	0	0	0

Supplementary Table 3. Descriptions of the questionnaires used in this study.

Questionnaire		Description	Range	
ASI	Anxiety Sensitivity Index 3	(Kemper et al., 2009)	Anxiety sensitivity is the fear of anxiety symptoms due to concerns about their physical, social, or cognitive harmfulness.	0 - 4
BDI	Beck-Depression Inventory II	(Kühner et al., 2007)	Measures the severity of depressive symptoms.	0 - 63
BFI	Big Five Inventory	(Rammstedt and Danner, 2017)	Inventory to assess the Big Five (OCEAN) personality traits.	1 - 5
CID-S	Composite International Diagnostic Screener	(Wittchen et al., 1999)	A 12-item self-report questionnaire based on the core diagnostic questions of the Composite International Diagnostic Interview, a time-efficient diagnostic screening tool for most DSM-IV and ICD-10 mental disorders.	0 - 12
FEE	assessment of disgust sensitivity	(Schienle et al., 2002)	Questionnaire for the assessment of disgust sensitivity.	1 – 5
FKK	competence and locus of control	(Krampen, 1991)	A questionnaire to assess generalized self-concept of own abilities, internality in generalized control beliefs, socially conditioned externality, and fatalistic externality	1 - 6
FSQ	Fear of Spider Questionnaire	(Szymanski and O'Donohue, 1995; Rinck et al., 2002)	An 18-item self-report questionnaire designed to assess spider phobia.	Fear of Harm: 0 - 60 Avoidance: 0 - 48 Total: 0 - 108
IE-4	The Internal-External Control Belief Scale	(Kovaleva et al., 2014)	A brief scale for measuring locus of control beliefs.	1 - 5
IPQ	iGroup Presence Questionnaire	(Schubert et al., 1999)	A 14-item questionnaire to measure the subjective sense of being in the virtual environment.	0 - 6
PQ3	Presence Questionnaire 3	(Witmer et al., 2005)	A 32-item questionnaire to measure the subjective sense of being in the virtual environment.	1 - 7
RSES	Rosenberg's global Self-Esteem	(Ferring and Filipp, 1996)	A psychological questionnaire designed to assess a person's self-esteem through self-assessment.	10 - 40
SAS	Fear of Spiders Screening	(Rinck et al., 2002)	A four-item questionnaire designed for efficient screening for fear of spiders.	0 - 24

SSQ	Simulator Sickness Questionnaire	(Kennedy et al., 1993)	A 21-item questionnaire to assess severity of cybersickness experienced during the virtual reality session.	Nausea: 0 – 200 Oculomotor: 0 – 159 Disorientation: 0 – 292 Total: 0 – 236
SSSV	Sensation Seeking Scales, Form V	(Beauducel et al., 2003)	A questionnaire with 40 forced-choice questions for sensation seeking to determine individual levels in sensory stimulation preferences.	0 – 10 Total: 0 – 40
TAI	Trait Anxiety	(Spielberger, 1983)	Trait anxiety or anxiety level as a personal characteristic.	20 - 80

Supplementary Table 4. Result of the rmANOVA of the duration spent in each third during the **Touch the Enemy** task with group as between-factor and trial, stimulus, and area as within-factors.
