

Supplementary Table. Factors known to precipitate myxedema coma

Hypothermia**Metabolic disruption**

- Hypoglycemia
- Hyperglycemia
- Hypercalcemia
- Hyponatremia
- Acidosis

Infection

- Pneumonia
- Influenza
- Urinary tract infection/urosepsis
- Sepsis

Cerebrovascular accidents

- Cardiac failure
- Myocardial infarction
- Stroke

Drugs

- Amiodarone
- Beta blockers
- Diuretics
- Lithium
- Anesthesia
- Barbiturates
- Tranquilizers
- Sedatives
- Narcotics
- Phenothiazines
- Phenytoin
- Rifampin

Discontinuation of thyroxine therapy**Burns****Trauma****Gastrointestinal bleeding****Surgery****Respiratory compromise**

- Hypoxemia
 - Hypercapnia
-
