Figure S1. Alignment of NGR_RS10960 (RpuS) and NGR_RS12300 (CrbS) from *S. fredii* NGR234 with CrbS from *P. fluorescens* SBW25. Relevant features are marked as follows: Red, Transmembrane regions of the SLC5 domain; Light green, STAC domain; Orange, PAS domain; Brown, DHp domain; Dark green, CA domain; Light Blue, REC Domain. Underlined bases indicate coiled coils.

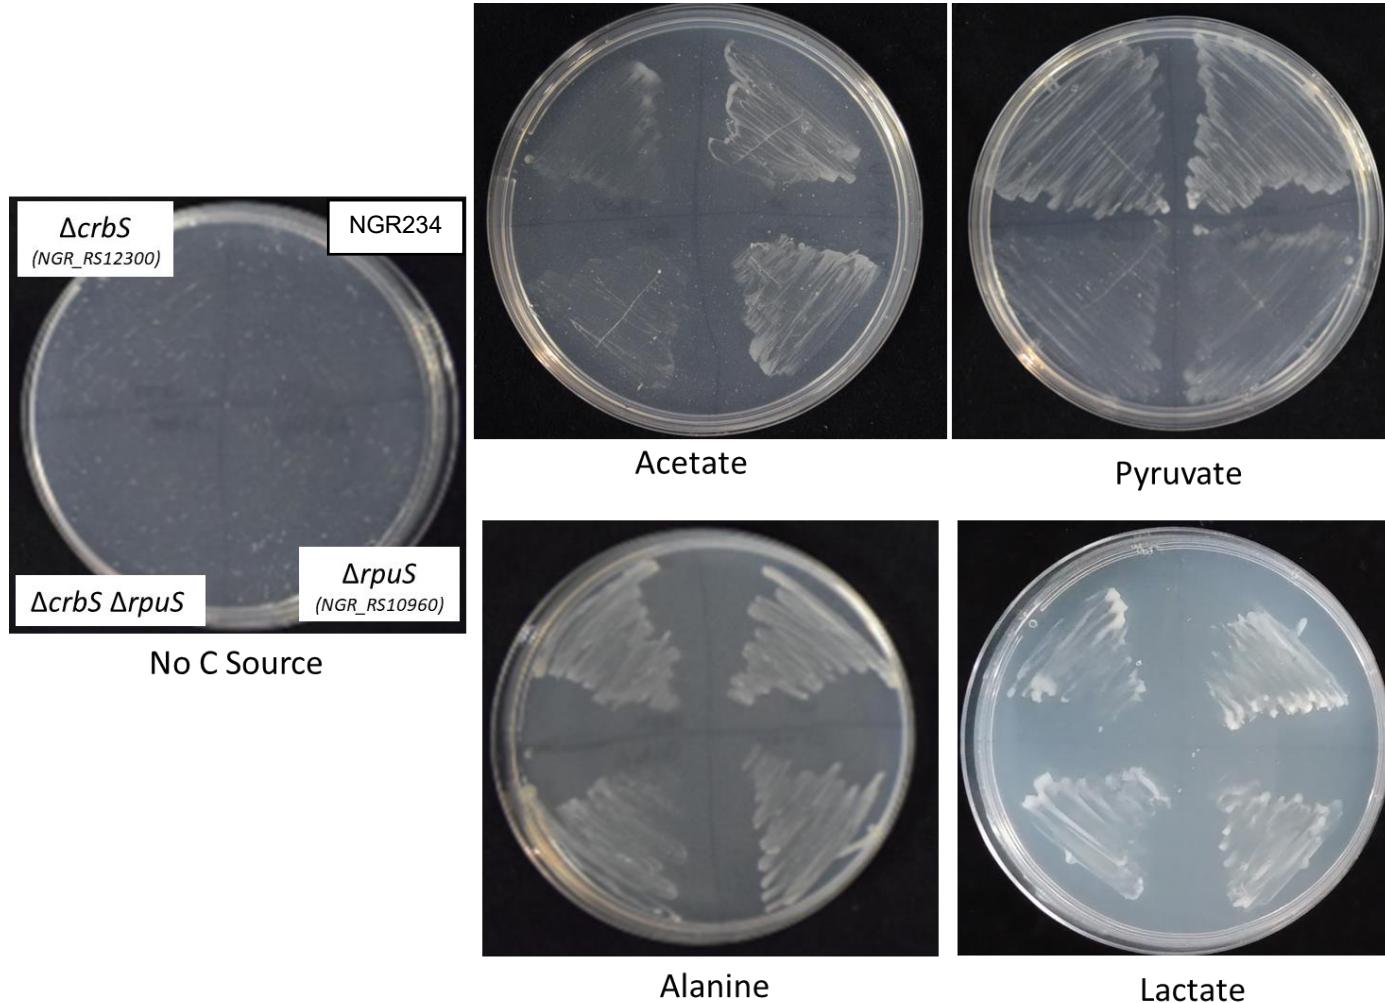

Figure S2. Growth of different *S. fredii* NGR234 strains in minimal media complemented with acetate, pyruvate or alanine as sole carbon source.

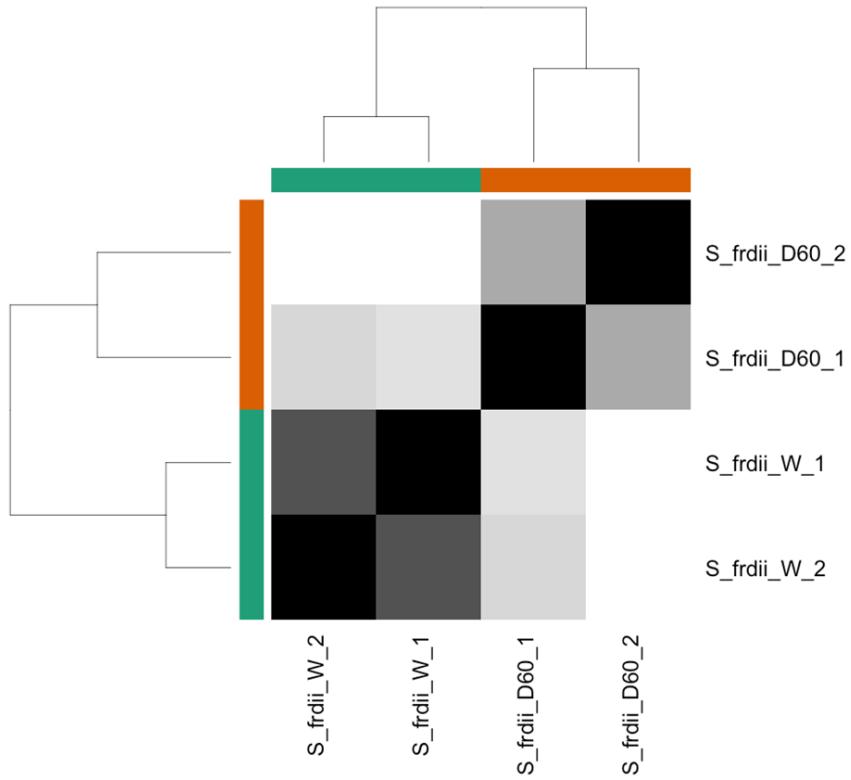

Figure S3. Global samples distance between RNAseq results from *S. fredii* NGR234 (S_frdii_W) and $\Delta rpuS$ strains (S_frdii_D60)

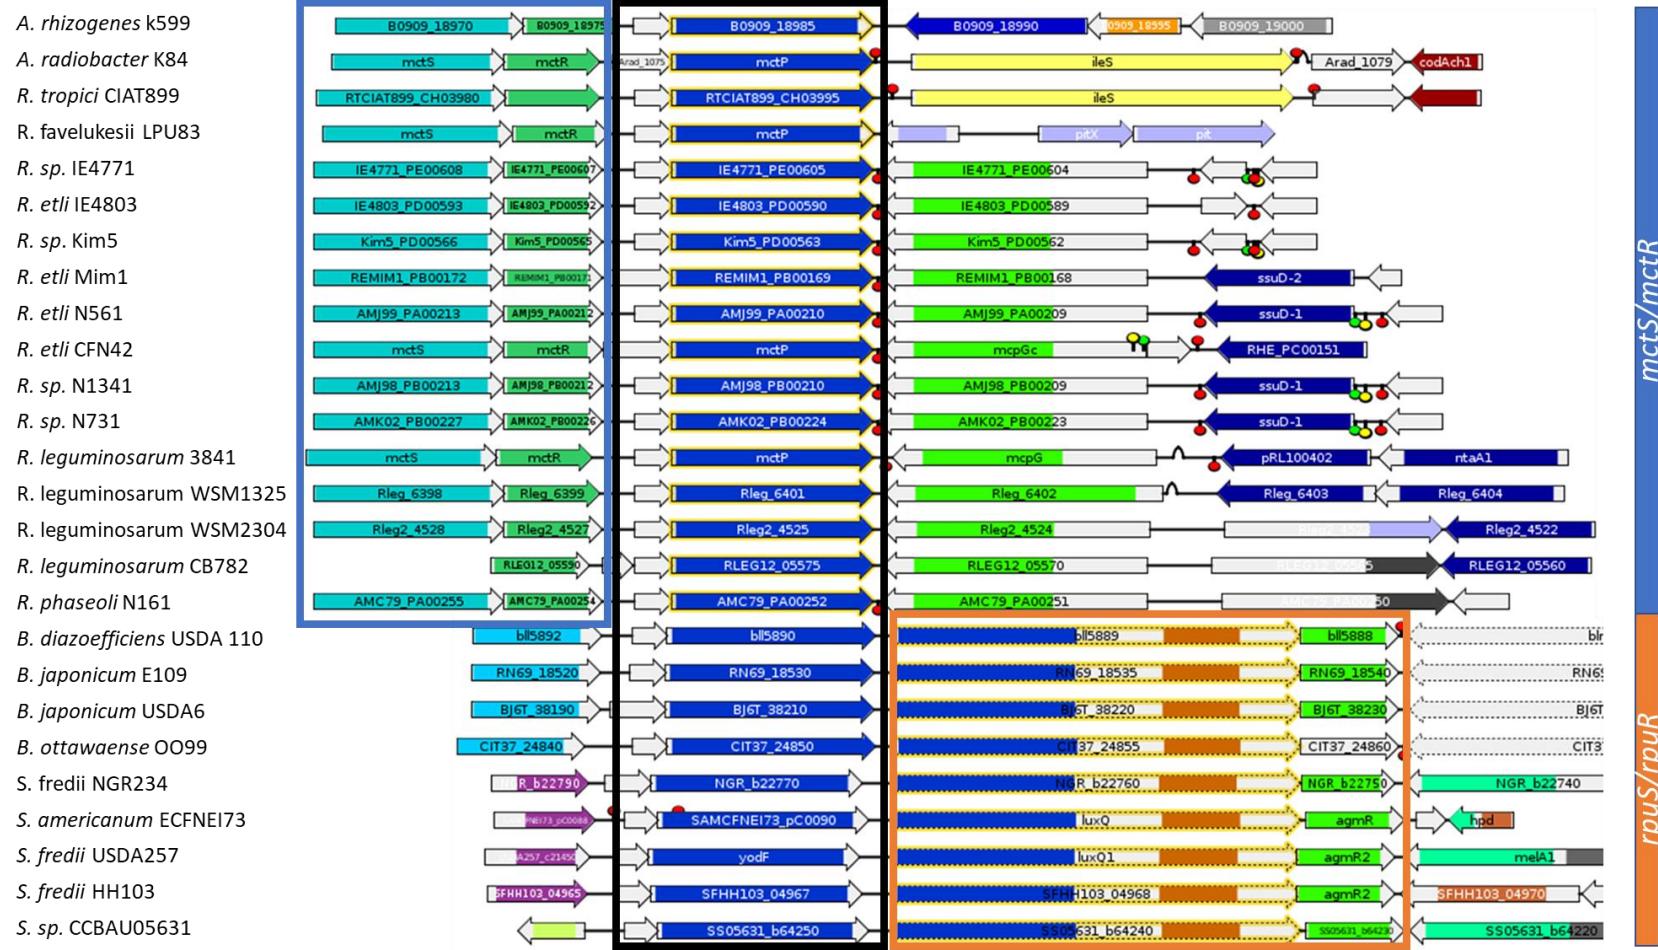

Figure S4. Genetic context of *mctP* (Blue arrows, black blox) in different Rhizobaceae neighbored by a *mctS/mctR* system (Blue box) or a *rpuS/rpuR* system (Orange box)
