## 1 SUPPLEMENTARY TABLES AND FIGURES

**Table S1.** IUCN status for 30 species that are not data deficient or of least concern. These species occur within the community-based marine reserves and are therefore recorded in the long-term ecological monitoring programs.

| IUCN Category | Species                            |
|---------------|------------------------------------|
| NT            | <i>Balistes vetula</i>             |
|               | <i>Ginglymostoma cirratum</i>      |
|               | <i>Lutjanus analis</i>             |
|               | <i>Lutjanus synagris</i>           |
|               | <i>Mycteroperca bonaci</i>         |
|               | <i>Mycteroperca venenosa</i>       |
|               | <i>Pseudobatos productus</i>       |
|               | <i>Scarus guacamaia</i>            |
|               | <i>Squatina californica</i>        |
|               | <i>Balistes capriscus</i>          |
| VU            | <i>Epinephelus morio</i>           |
|               | <i>Ginglymostoma cirratum</i>      |
|               | <i>Holacanthus clarionensis</i>    |
|               | <i>Lachnolaimus maximus</i>        |
|               | <i>Lutjanus cyanopterus</i>        |
|               | <i>Mycteroperca interstitialis</i> |
|               | <i>Narcine entemedor</i>           |
|               | <i>Semicossyphus pulcher</i>       |
| EN            | <i>Aetobatus narinari</i>          |
|               | <i>Haliotis kamtschatkana</i>      |
|               | <i>Isostichopus fuscus</i>         |
|               | <i>Mycteroperca jordani</i>        |
| CR            | <i>Epinephelus striatus</i>        |
|               | <i>Haliotis corrugata</i>          |
|               | <i>Haliotis cracherodii</i>        |
|               | <i>Haliotis fulgens</i>            |
|               | <i>Haliotis rufescens</i>          |
|               | <i>Haliotis sorenseni</i>          |
|               | <i>Pycnopodia helianthoides</i>    |
|               | <i>Stereolepis gigas</i>           |
