

SUPPLEMENTARY DATA:

Table S1: Dye-switching strategy applied during labeling to avoid dye-specific bias. A total of 14 patient samples (7 BDG and 7 control) were run on 7 2D-PAGE gels. Samples were labeled randomly with Cy3 and Cy5, and a pooled sample was used as an internal standard and was stained with Cy2 [BDG Benign diffuse goiter, C: Control]

Gel	Cy3	Cy5	Cy2
1	BDG1	C1	Pooled sample
2	C2	BDG2	Pooled sample
3	BDG3	C3	Pooled sample
4	C4	BDG4	Pooled sample
5	BDG5	C5	Pooled sample
6	C6	BDG6	Pooled sample
7	BDG7	C7	Pooled sample

Table S2: Mass spectrometry list of significant differentially abundant proteins between BDG and control states identified in thyroid tissue samples, using 2D-DIGE with. Protein name, accession number, Mascot score, MS % coverage, protein MW and pI values according to Uniprot database are listed.

^a Spot number.

^b Protein accession number for SWISSPROT Database.

^c Theoretical isoelectric point.

^d Theoretical relative mass.

^e MASCOT score

Figure S1: 2D DIGE numbered spots specify proteins with differential abundance (fold-change ≥ 1.5 , $P \leq 0.05$) that were identified using MALDI-TOF mass spectrometry comparing tissue samples from BDG and control states. pI stands for isoelectric point.

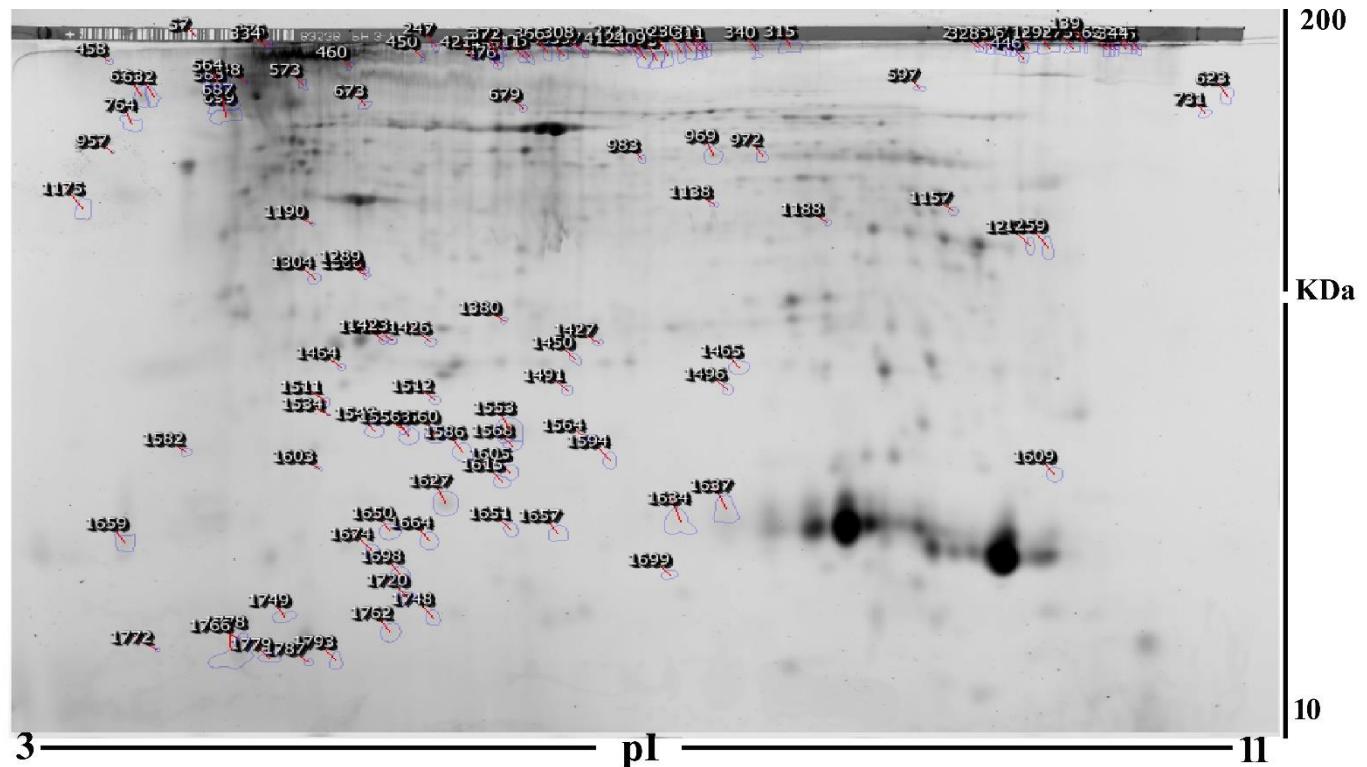

Figure S2: Pathways and canonical pathways identified in the IPA functional analysis.

Top Canonical Pathways		
Name	p-value	Overlap
Acute Phase Response Signaling	4.08E-07	3.9 % 7/180
NRF2-mediated Oxidative Stress Response	5.68E-07	3.7 % 7/189
Clathrin-mediated Endocytosis Signaling	6.54E-07	3.6 % 7/193
Caveolar-mediated Endocytosis Signaling	3.84E-05	5.5 % 4/73
Glycolysis I	4.09E-05	11.5 % 3/26
