

Supplemental Figures

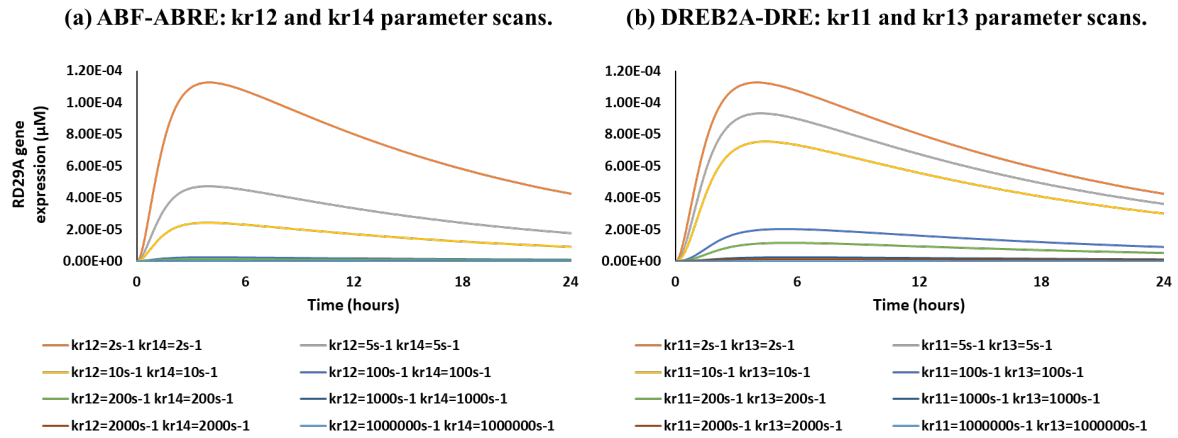

Figure S1. Changes in the *RD29A* gene expression with a function of binding affinity. The *RD29A* gene expression was stimulated with the alternated binding affinities, 2, 5, 10, 100, 200, 1000, 2000, and 10^6 μM in (a) ABF-ABRE interaction (parameters kr12 and kr14) or (b) DREB2A-DRE interaction (parameters kr11 and kr13).
