Supplementary Figures

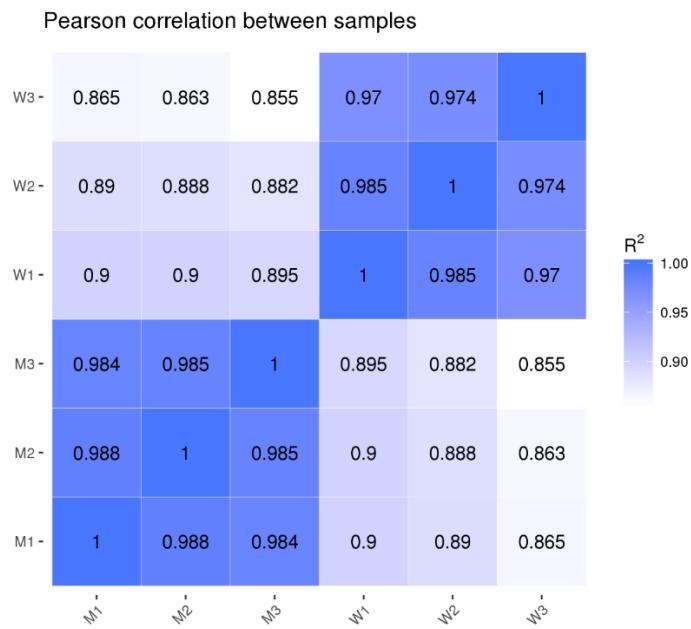

Figure S1. Heat map of the correlation coefficient between samples. M1-M3 represents three biological duplications of deletion strain, W1-W3 represents three biological duplications of wild strain, R^2 represents the square of Pearson correlation coefficient. $R^2 > 0.95$ between the three biological replicates, indicating a good correlation.

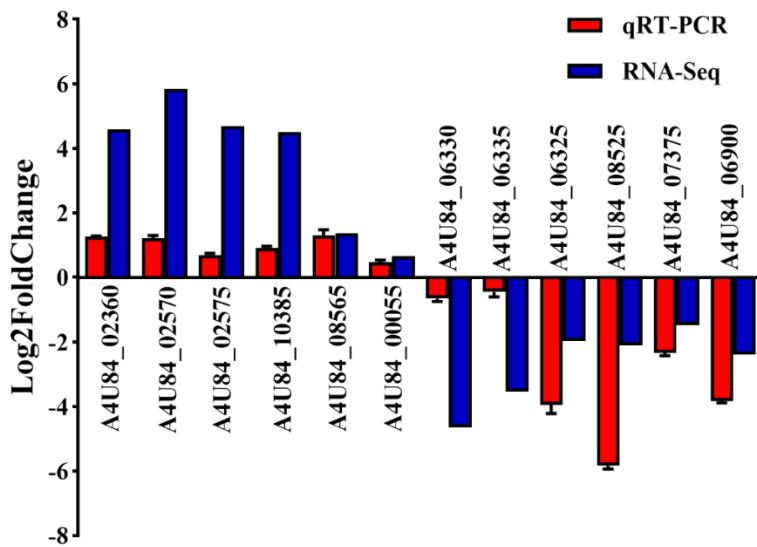

Figure S2. Validation of RNA-Sequencing results by quantitative RT-PCR. Log2 fold change comparison of RNA-Seq (blue bars) and quantitative real-time PCR (red bars) for six differentially expressed genes upregulated at $\Delta tfoX::\text{Kan}$, six genes downregulated at $\Delta tfoX::\text{Kan}$. RT-PCR results showed general consistency with RNA-seq data.
