

Supplementary Figure 1. The original images of Western blots for two key photosynthetic enzymes (Rubisco (subunit L) and PEPC) from total proteins extracted from shoots of *Kochia prostrata*. Numbers at the left indicate molecular mass in kilodaltons. M – marker, C – Control, 1 – 4 days of 100 mM NaCl treatment, 2 – 4 days of 200 mM NaCl treatment, 3 – 10 days of 100 mM NaCl treatment, 4 – 10 days of 200 mM NaCl treatment.
