FICI, fractional inhibitory concentration index. ↑↑, the increase in the DHA27 group compared with the DNR

group was statistically different; ↑, Compared with the DNR group, DHA27 group showed an upward trend but

no statistically significant difference; —, DHA27 group showed no upward trend compared with the DNR

group; ↓↓, compared with the DNR group, the DHA27 group showed a statistically significant decrease; ↓, the

DHA27 group showed a decreasing trend compared with the DNR group, but there was no statistically

significant difference.

Supplementary Table 2

Effect of DHA27 antibacterial sensitization and tobramycin (TOB) resistance on 16S rRNA methyltransferase (16S-RMtases) in *Pseudomonas aeruginosa*

| Isolate name | MIC | | FICI | 16S rRNA | Effect on 16S-RMtases | |
