

Supplementary Table 1. Primers used for *nrfA* gene pyrosequencing

| Primer name   | Direction |  |
|---------------|-----------|--|
| nrfA2F-A-M351 | Forward   | <b>CCATCTCATCCCTGCGTGTCTCCGACTCAG ATCGGCTA CARTGYCAYGTBGARTA</b> |
| nrfA2F-A-M352 | Forward   | <b>CCATCTCATCCCTGCGTGTCTCCGACTCAG ATCGTACG CARTGYCAYGTBGARTA</b> |
| nrfA2F-A-M353 | Forward   | <b>CCATCTCATCCCTGCGTGTCTCCGACTCAG ATCGTAGC CARTGYCAYGTBGARTA</b> |
| nrfA2F-A-M354 | Forward   | <b>CCATCTCATCCCTGCGTGTCTCCGACTCAG ATCGTTCC CARTGYCAYGTBGARTA</b> |
| nrfA2F-A-M355 | Forward   | <b>CCATCTCATCCCTGCGTGTCTCCGACTCAG ATCGTTGG CARTGYCAYGTBGARTA</b> |
| nrfAR1-triP1  | Reverse   | <b>CCTCTCTATGGGCAGTCGGTGAT TWNGGCATRTGRCARTC</b>                 |

Sequences in bold fonts are the PGM adapter.

Sequences in italic fonts are the 8-bp barcode.

Sequences in regular fonts are the *nrfA* primers.

**Supplementary Table 2.** Pearson's correlation analysis of DNRA rates, abundance, diversity and environmental variables

|                            | Salinity | NO <sub>3</sub> <sup>-</sup> | NH <sub>4</sub> <sup>+</sup> | %organic | H <sub>2</sub> S | NO <sub>x</sub> <sup>-</sup> | Extractable NH <sub>4</sub> <sup>+</sup> |
|----------------------------|----------|------------------------------|------------------------------|----------|------------------|------------------------------|--|
| DNRA rate                  | -0.392   | -0.704                       | -0.197                       | 0.739    | 0.412            | -0.605                       | 0.855                                    |
| <i>nrfA</i> gene abundance | -0.190   | -0.796                       | -0.437                       | 0.606    | 0.674            | -0.639                       | 0.786                                    |
| Richness <sup>1</sup>      | -0.181   | 0.134                        | 0.633                        | -0.084   | -0.488           | -0.629                       | -0.451                                   |
| Diversity <sup>2</sup>     | 0.067    | 0.578                        | 0.682                        | -0.534   | -0.670           | -0.075                       | -0.944*                                  |
| Evenness                   | -0.070   | 0.187                        | 0.369                        | -0.285   | 0.019            | 0.139                        | -0.743                                   |
| Dorminant sequences        | -0.212   | -0.766                       | -0.400                       | 0.625    | 0.597            | -0.638                       | 0.817                                    |
| Endemic sequences          | 0.339    | 0.845                        | 0.418                        | -0.768   | -0.705           | 0.515                        | -0.940*                                  |

\*indicates P<0.05.

<sup>1</sup>Chao1 estimate was used to represent the richness of NrfA sequences in each community.

<sup>2</sup>Shannon index represented diversity of NrfA sequences in each community.

**Supplementary Table 3.** Number of dominant and endemic NrfA OTUs in the five sediment communities of the New River Estuary

| Sampling site | Dominant OTUs | Endemic OTUs |
|---------------|---------------|--------------|
| AA2           | 18            | 678          |
| JAX           | 20            | 339          |
| M47           | 16            | 310          |
| M31           | 13            | 548          |
| M15           | 19            | 590          |
