

Supplementary Material

Figure S1

Serum levels of apelin-13 (A), apelin-36 (B), Apelin-17 (C) and GDF-15 (D) in n=10 IPAH patients, n=10 age- and sex-matched controls as well as n=10 CTEPH patients represented as Whisker-Blot plots. Points above or below the plots represent outliers. p<0.05 was considered statistically significant

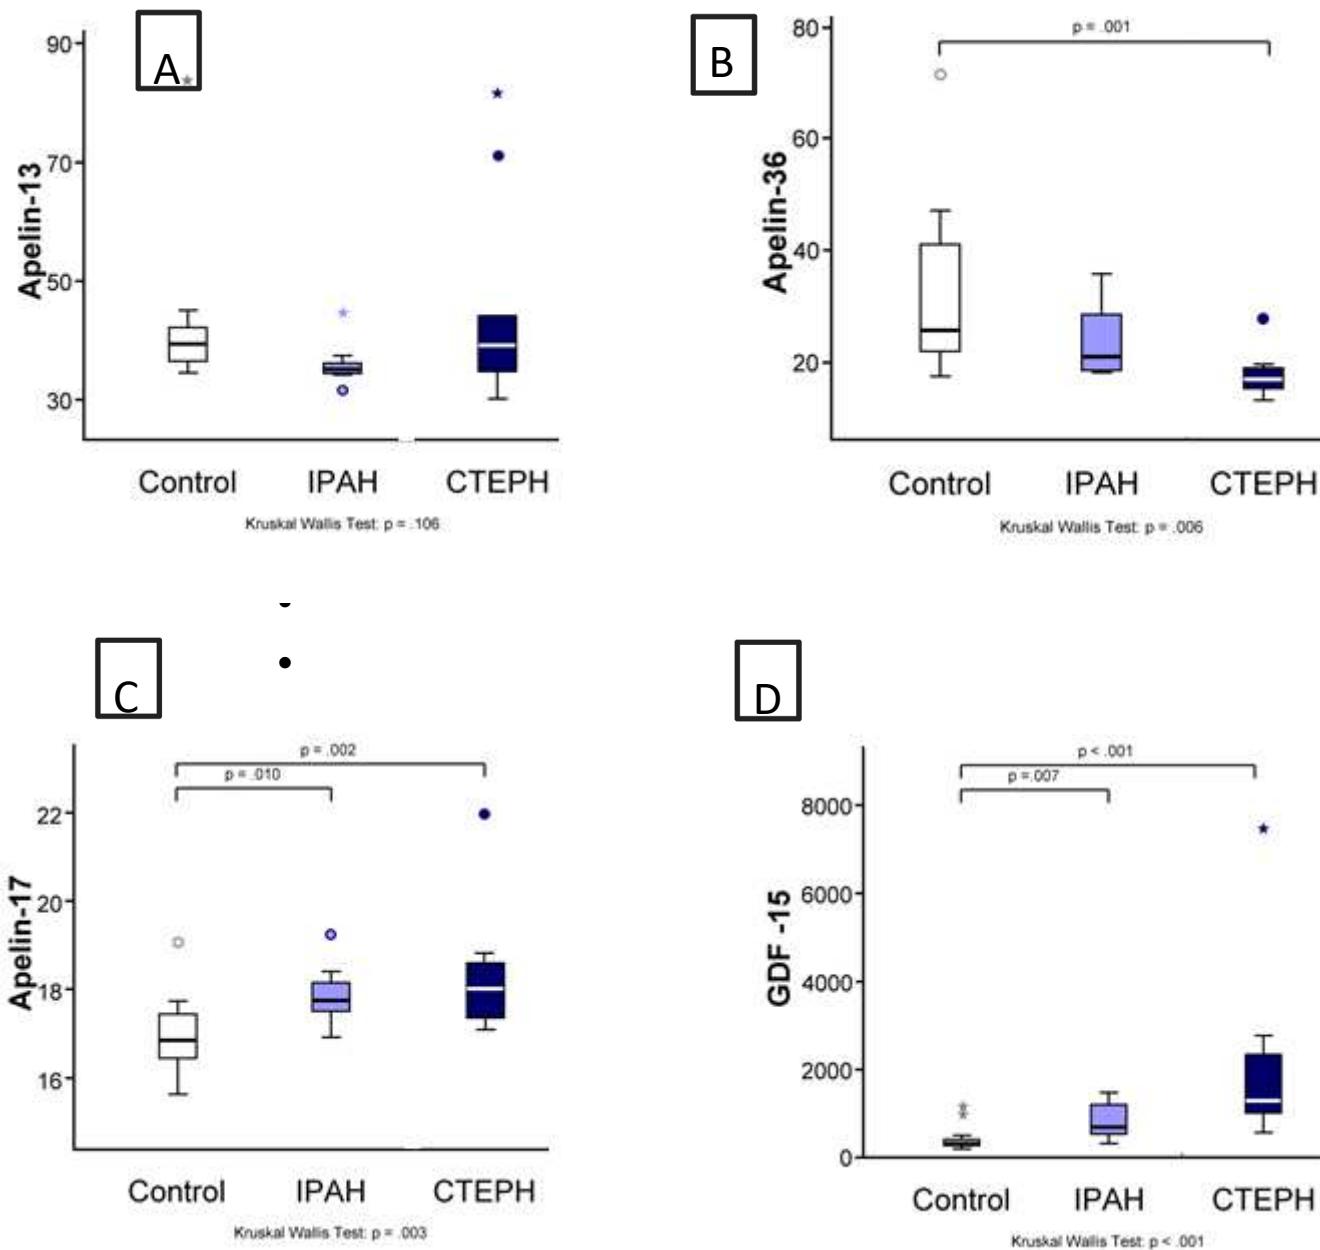

Figure S2

Serum levels of apelin-13 (A), apelin-17 (B), apelin-36 (C) and GDF-15 (D) in n=21 IPAH patients, n=21 age- and sex-matched controls as well as n=21 CTEPH patients represented as Whisker-Blot plots. Points above or below the plots represent outliers. p<0.05 was considered statistically significant

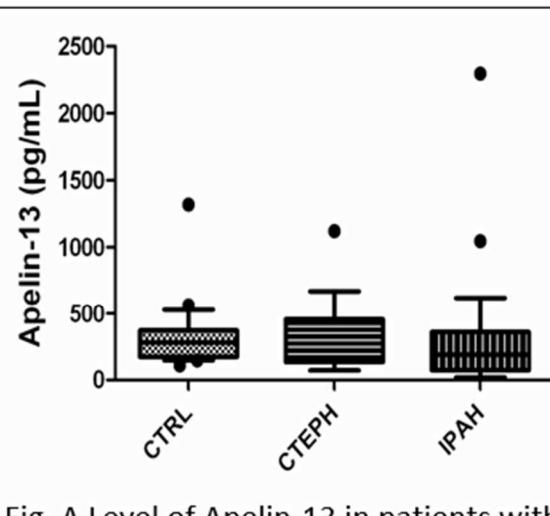

Fig. A Level of Apelin-13 in patients with IPAH, CTEPH and controls

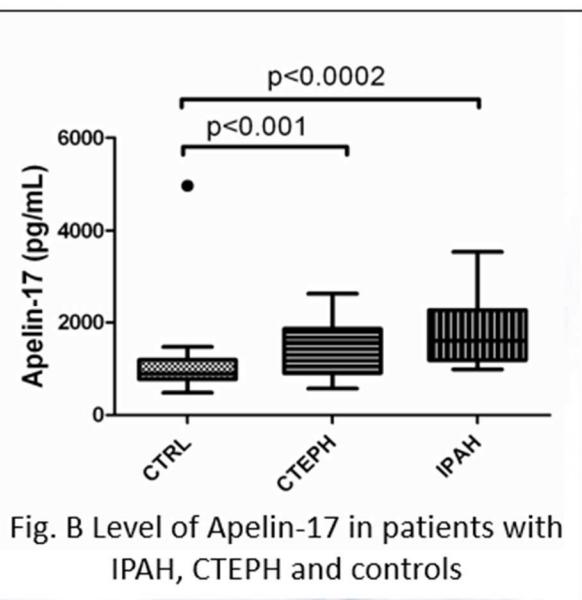

Fig. B Level of Apelin-17 in patients with IPAH, CTEPH and controls

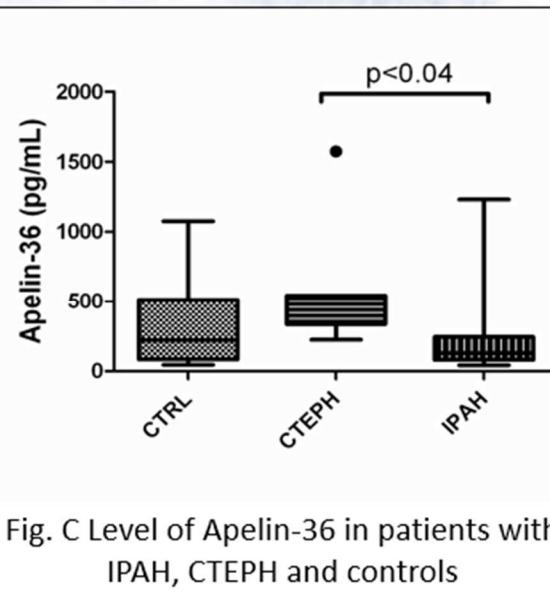

Fig. C Level of Apelin-36 in patients with IPAH, CTEPH and controls

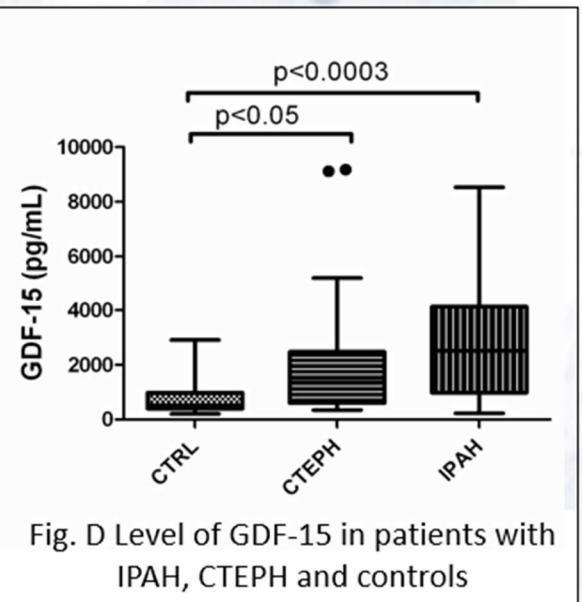

Fig. D Level of GDF-15 in patients with IPAH, CTEPH and controls

Table S1. Spearman correlation analysis results for IPAH patients between the investigated biomarkers and clinical variables. Cells filled with green indicate a significant ($p<0.05$) correlation.
