

Supplementary Material

Supplementary Material S1 | Nucleotide sequences of the receptor binding domain (RBD, aminoacids 319-541) and the full-length stabilized version of the Spike protein (GeneBank: MN908947.3). Restriction enzymes used for the plasmid construction are marked in bold.

Target sequence: RBD

Supplementary Material S2 | List of N-glycan composition screened in Spike protein MS analysis. The database is composed of 69 types of glycans.

Note: For glycosylation comparison between human and plant recombinant Spike, the numeric order of the 109 glycans identified by Castro et al. (2021) was maintained, and the 6 glycans identified in plants were added from position No. 110 to No. 115. For the screening, all glycans containing sialylation were removed.

Supplementary Material S3 | Purification of RBD protein by immobilized metal affinity using a HisTrap™ High Performance column. **(A)** WB analysis of the eluted fractions of RBD protein with anti-RBD antibody, A - sample, Ft - flow through, W - wash, E500 - eluted fraction. **(B)** WB analysis of spent media from seven independent BY-2 lines (L1 to L7, samples corresponding to Figure 3E) with anti-His tag antibody.

Supplementary Material S4 | Comparison of RBD protein produced in BY-2 and HEK cells under non-reducing conditions. **(A)** Stained gel containing the spent medium of BY-2 cell line 5, L5-reducing conditions, L5 nr- non-reducing conditions. **(B)** Corresponding WB with anti-RBD antibody. **(C)** Stained gel containing the purified RBD from HEK cells, HEK-RBD- reducing conditions, HEK-RBD nr- non-reducing conditions.

Supplementary Material S5 | Detection of Spike native conformation in BY-2 spent medium. Samples for two independent lines (L3 and L4, same samples as in Figure 7B) were loaded into a 5 % polyacrylamide native gel and subjected to WB detection with anti-Spike antibody.
