#### A Corrigendum on

Variations in Vaginal, Penile, and Oral Microbiota After Sexual Intercourse: A Case Report by Carda-Diéguez, M., Cárdenas, N., Aparicio, M., Beltrán, D., Rodríguez, J. M., and Mira, A. (2019). Front. Med. 6:178. doi: 10.3389/fmed.2019.00178

In the original article, there was a mistake in **Figure 1** as published. The penile swab compositions for  $H_2O_2$  and  $15H_2O_2$  were mistakenly swapped. Similarly, the vaginal swab compositions for  $H_2O_2$  and  $15H_2O_2$  were also mistakenly swapped. The corrected **Figure 1** appears below.

The authors apologize for this error and state that this does not change the scientific conclusions of the article in any way. The original article has been updated.

**FIGURE 1** Microbial composition of penile and vaginal swabs. Most abundant genus were plotted in different colors. NoS, microbiota without sexual intercourse; BeS, immediately before sexual encounter; AfUS, 4 days after unprotected sexual encounter, no oral sex and with ejaculation inside the vagina; AfPS, immediately after vaginal sex with condom and oral sex; H<sub>2</sub>O<sub>2</sub> after 1 day of H<sub>2</sub>O<sub>2</sub> treatment; 15H<sub>2</sub>O<sub>2</sub>, after 15 days of intermittent H<sub>2</sub>O<sub>2</sub> treatment. Male and female samples are indicated with the corresponding symbol.
