## A Corrigendum on

### Composition and Diversity of CRISPR-Cas13a Systems in the Genus *Leptotrichia*

by Watanabe, S., Cui, B., Kiga, K., Aiba, Y., Tan, X.-E., Sato'o, Y., et al. (2019). *Front. Microbiol.* 10:2838. doi: 10.3389/fmicb.2019.02838

In the original article, there was a mistake in **Table 1** as published. "GC% of *L. wadei* JMUB3933, JMUB3934, JCM16777, *Leptotrichia* sp.-1 JMUB3936, *L. shahii* JCM16776, *L. hofstadii* JCM16775, *L. trevisanii* JMUB3870, JMUB4039, JMUB3935 and *L. buccalis* C-1013-b, *Leptotrichia* sp.-3 F0260, *Leptotrichia* sp. F0590, *L. goodfellowi* JCM16774 and *Leptotrichia* sp.-6 W10393, and chromosome length of *L. wadei* JCM16777" were incorrect. The corrected **Table 1** appears below.

In the original article, there was an error. GC% of genome-sequenced strains was incorrect.

A correction has been made to Results and Discussion, Comparative Analysis of *Leptotrichia* Genome, line 373-375:

As shown in **Table 1**, the chromosome size of the genus *Leptotrichia* varies from 2,142,946 to 2,829,322 bp with GC contents of 29.5% to 31.7%.

The authors apologize for this error and state that this does not change the scientific conclusions of the article in any way. The original article has been updated.
