## A corrigendum on

### Activation of transient receptor potential vanilloid 4 increases NMDA-activated current in hippocampal pyramidal neurons

by Li, L., Qu, W., Zhou, L., Lu, Z., Jie, P., Chen, L., et al. (2013). *Front. Cell. Neurosci.* 7:17. doi: 10.3389/fncel.2013.00017

The dosage of HC-067047 used in the article by Li et al. (2013) should be “10 μM/2 μl/mouse.” In addition, in appendix, the perfusion solution for recording EPSCs should be composed

of (in mM): NaCl 126, CaCl<sub>2</sub> 1, KCl 2.5, MgCl<sub>2</sub> 1, NaHCO<sub>3</sub> 26, KH<sub>2</sub>PO<sub>4</sub> 1.25, D-glucose 20 and bicuculline 0.01.
