## ERROR IN FIGURE/TABLE

In the original article, there was a mistake in **Figure 4: *M. leprae* 3 $\beta$ -HSD is a source of reductive power** as published. Instead of original **Figure 4** image, the **Supplementary Figure 4** was duplicated and published as **Figure 4**, and the correct one is not on the published version of the article. The corrected **Figure 4: *M. leprae* 3 $\beta$ -HSD is a source of reductive power** appears below. The authors apologize for this error and state that this does not change the scientific conclusions of the article in any way. The original article has been updated.

**Publisher's Note:** All claims expressed in this article are solely those of the authors and do not necessarily represent those of their affiliated organizations, or those of the publisher, the editors and the reviewers. **FIGURE 4 |** *M. leprae* 3 $\beta$ -HSD is a source of reductive power. **(A, B)** NAD<sup>+</sup> and NADP<sup>+</sup> reduction to NADH and NADPH, respectively, by 3 $\beta$ -HSD activity was measured in a temporal kinetic curve every 30 s for 20 min at 340 nm. **(C)** Cytochrome C reduction was determined measuring the reduced form of Cytochrome C at 550 nm every 30 s for 20 min. In all conditions *M. leprae* WCL was incubated with 200  $\mu$ M cholesterol, alone (blue) or in the presence of 100  $\mu$ M compound 1 (red). A condition without cholesterol addition was also included as a control of basal levels (black). Representative of 3 independent experiments.
