## KEYWORDS

high-dimensional mass cytometry, diabetic nephropathy, immune disorder, peripheral blood mononuclear cell (PBMC), type II diabetes mellitus

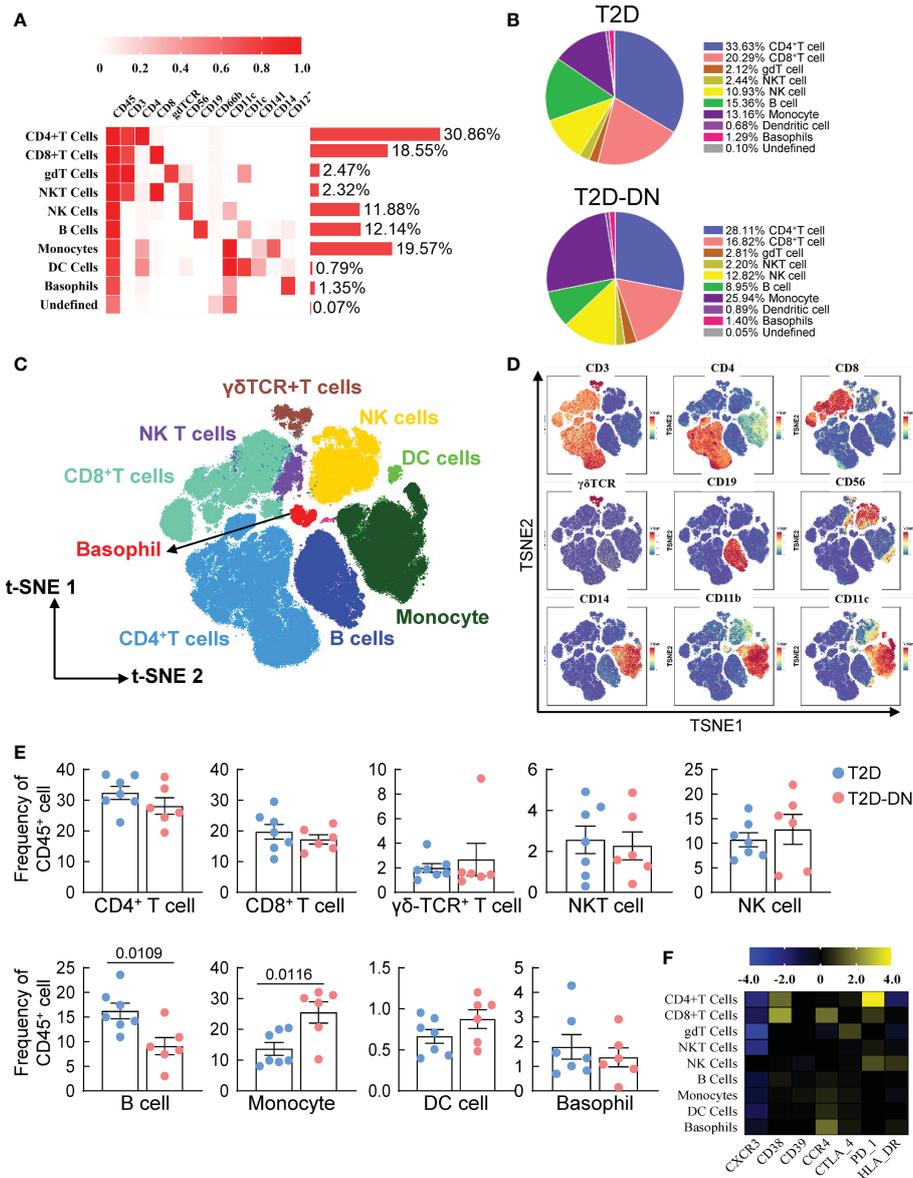

## A Corrigendum on

### Depiction of immune heterogeneity of peripheral blood from patients with type II diabetic nephropathy based on mass cytometry

By Jin J, Wang L, Liu Y, He W, Zheng D, Ni Y and He Q (2023) *Front. Endocrinol.* 13:1018608. doi: 10.3389/fendo.2022.1018608

In the published article, there was an error in [Figure 1](#) as published. In [Figure 1B](#) the legend of the data for T2D and T2D-DN groups were erroneously the same. The corrected [Figure 1](#) and its caption appear below.

The authors apologize for this error and state that this does not change the scientific conclusions of the article in any way. The original article has been updated.

**FIGURE 1** Peripheral immunity signature traits in the early-stage diabetic nephropathy patients. **(A)** Heatmap analysis for the overall proportions of major immune cell subsets in diabetic nephropathy **(B)** Pie chart characterizing the differences of major immune cell subsets proportions between T2D-DN and T2D patients. **(C)** Distributions of major immune cell subsets **(D)** The key immune cell markers for immune cell subsets are analyzed by t-SNE algorithm. **(E)** Statistical frequency differences of immune cell subsets between T2D-DN and T2D patients. **(F)** Heatmap analysis for the expressions of functional immune cell markers in the measurable immune cell subsets. Data are expressed as means  $\pm$  SEM,  $n = 6$  in T2D-DN group and  $n = 7$  in T2D group.
