A Corrigendum on

The value of targeted CXCR4 ¹⁸F-AIF-NOTA-pentixafor PET/CT for subtyping primary aldosteronism

by Peng Y, Chen F, Yao R, Lan J, Fu Y, Ye K, Wang Z, Zhao Q, Ji X, Xia K, Zhu G, Zheng K, Gu X
and Tang K (2025) *Front. Endocrinol.* 16:1533295. doi: 10.3389/fendo.2025.1533295

In the published article, there was an error in **Figure 7** as published. We mistakenly exported and uploaded this figure. The corrected **Figure 7** and its caption appear below.

In the published article, there was an error in section 2. Materials and Methods, *Adrenal Venous Sampling Interpretation*, Paragraph 1. The following sentence was removed.

“If the ratio of aldosterone/cortisol in the high-side adrenal vein blood to the low-side adrenal vein blood is 4 or greater, it indicates increased aldosterone secretion from one side of the adrenal gland, which is diagnosed as APA.”

In the published article, there was an error in section 3. Results, *Diagnostic Accuracy of 18F-AIF-NOTA-pentixafor PET/CT for surgically eligible lesions*, Paragraph 1. The following sentence was removed.

“Among enrolled patients, 2 UPA patients exhibited 2 hot nodules in the ipsilateral adrenal gland, 2 UPA patients exhibited a cold lesion contralateral to the UPA lesion, and 3 NFA patients exhibited bilateral nodules. The remaining 81 patients displayed unilateral adrenal gland lesions on CT scans.”

The authors apologize for these errors and state that this does not change the scientific conclusions of the article in any way. The original article has been updated.
