In the published article, there was an error in **Table 2**. The count of monoclonal antibodies used was interchanged during production between the different antibodies. The corrected **Table 2** and its caption appear below.

The authors apologize for this error introduced during production and state that this does not change the scientific conclusions of the article in any way. The original article has been updated.

TABLE 2 Immune-related adverse events and immunosuppression.

Baseline characteristics	Patients, n = 22 (%)
irAE	
Grade 1	3 (13.6)
Grade 2	5 (22.7)
None	14 (63.6)
Liver irAE	
Grade 1	2 (9.1)
Grade 2	1 (4.5)
Non-Liver irAE	
Colitis	1 (4.5)
Pneumonitis	1 (4.5)
Inflammatory arthritis	1 (4.5)
Rash	2 (9.1)
Treatment regimen before ICI[#]	
Mycophenolate mofetil	1 (4.5)
Azathioprine	4 (18.1)
Corticosteroids	2 (9.1)
Methotrexate*	1 (4.5)
UDCA	9 (40.9)
Obeticholic acid	1 (4.5)

(Continued)

TABLE 2 Continued

Baseline characteristics	Patients, n = 22 (%)
No treatment for AILD	7 (31.8)
Treatment adjustment during ICI therapy due to non-liver related events[#]	
Start Hydroxychloroquine*	1 (4.5)
Start or increase of corticosteroids	2 (9.1)
No change in treatment	16 (72.7)
Treatment adjustment during ICI therapy due to ILICI or AILD[#]	
Start or increase of corticosteroids	2 (9.1)
Start UDCA	1 (4.5)
Change from obeticholic acid to Fenofibrate	1 (4.5)
Stop Azathioprine	1 (4.5)
No change in treatment	16 (72.7)
Monoclonal antibody used	
Atezolizumab	7 (31.8)
Durvalumab	5 (22.7)
Pembrolizumab	4 (18.1)
Nivolumab	4 (18.1)
Nivolumab + Ipilimumab	1 (4.5)
Spartalizumab	1 (4.5)

No changes in immunosuppressive therapy were made before commencing ICI treatment to prevent potential irAEs. [#]Multiple treatments possible *Treatment for Rheumatoid arthritis.
