## KEYWORDS

Food Webs Analysis (FWA), environmental DNA (eDNA), marine communities, abiotic factors, fishing pressure, Mediterranean Sea

## A Corrigendum on

### [Spatial analysis of demersal food webs through integration of eDNA metabarcoding with fishing activities](#)

By Cicala D, Maiello G, Fiorentino F, Garofalo G, Massi D, Sbrana A, Mariani S, D'Alessandro S, Stefani M, Perrodin L and Russo T (2024) *Front. Mar. Sci.* 10:1209093. doi: 10.3389/fmars.2023.1209093

## Missing Citation

In the published article [D'Alessandro & Mariani, 2021] was not cited in the article. The citation has now been inserted in [Introduction], [Paragraph Number 2] and should read:

“eDNA metabarcoding in fact emphasises the taxonomic units rather than pools and fluxes of energy, biomass or nutrients, enabling accurate and cost-effective biodiversity assessments (D'Alessandro and Mariani, 2021; Kelly et al., 2017, 201; Stat et al., 2019), which leads to Molecular Ecological Network Analysis (MENA - Deng et al., 2012; Stat et al., 2019).”

The full reference is: D'Alessandro, S., and Mariani, S. (2021). Sifting environmental DNA metabarcoding data sets for rapid reconstruction of marine food webs. *Fish Fish* 22, 822–833. doi: 10.1111/faf.12553.

The authors apologize for this error and state that this does not change the scientific conclusions of the article in any way. The original article has been updated.
