A Corrigendum on

Increased Activation of Default Mode Network in Early Parkinson's With Excessive Daytime Sleepiness

by Ooi, L. Q. R., Wen, M.-C., Ng, S. Y.-E., Chia, N. S.-Y., Chew, I. H. M., Lee, W., et al. (2019). *Front. Neurosci.* 13:1334. doi: 10.3389/fnins.2019.01334

In the original article, there was a mistake in **Table 1** as published. The ages reflected in the second and third columns are inputted incorrectly due to a copy-paste error. The corrected Table 1 appears below.

The authors apologize for this error and state that this does not change the scientific conclusions of the article in any way. The original article has been updated.

TABLE 1 | Demographical summary of subjects.

	EDS-	EDS+	P-value
N	81	17	
Gender (M, F)	9, 21	14, 3	0.073
Age (years)	62.77 (9.85)	65.35 (6.07)	0.324
MoCA	25.99 (2.63)	27.35 (2.69)	0.018
GDS	1.59 (1.55)	1.12 (0.99)	0.349
HADS (Depression)	2.25 (2.11)	2.53 (2.15)	0.638
HADS (Anxiety)	2.04 (2.61)	2.29 (2.57)	0.704
Apathy Scale	7.57 (5.70)	9.12 (4.83)	0.205
UPDRS-III	19.75 (10.72)	21.94 (8.86)	0.395
TIV (mm ³)	1427809 (59272.98)	1418801 (64149.67)	0.351
ESS	4.59 (2.44)	11.62 (1.59)	<0.001

Statistical comparison for gender was done through the chi-square test while the others were compared using the Kruskal Wallis rank-sum test. EDS-, patients without EDS; EDS+, patients with EDS; MoCA, montreal cognitive assessment; GDS, 15-item geriatric depression scale; HADS, hospital anxiety and depression scale; UPDRS-III, movement disorder society (MDS)- Unified Parkinson's Disease Rating Scale- Part III; ESS, epworth sleepiness scale; TIV, total intracranial volume. The bold values are significant values.
