A Corrigendum on

The Hsp90 Inhibitor, Monorden, Is a Promising Lead Compound for the Development of Novel Fungicides

by Nguyen, H. T. T., Choi, S., Kim, S., Lee, J.-H., Park, A. R., Yu, N. H., et al. (2020). *Front. Plant Sci.* 11:371. doi: 10.3389/fpls.2020.00371

In the original article, there were mistakes in **Figure 1C** and **Figure 4B** as published. Figure 1D (*Phytophthora cactorum*) was duplicated in **Figure 1C** (*Phytophthora cambivora*) and two representative images for cucumber damping-off symptom were overlapped in **Figure 4B**. The corrected figures appear below.

The authors apologize for this error and state that this does not change the scientific conclusions of the article in any way. The original article has been updated.

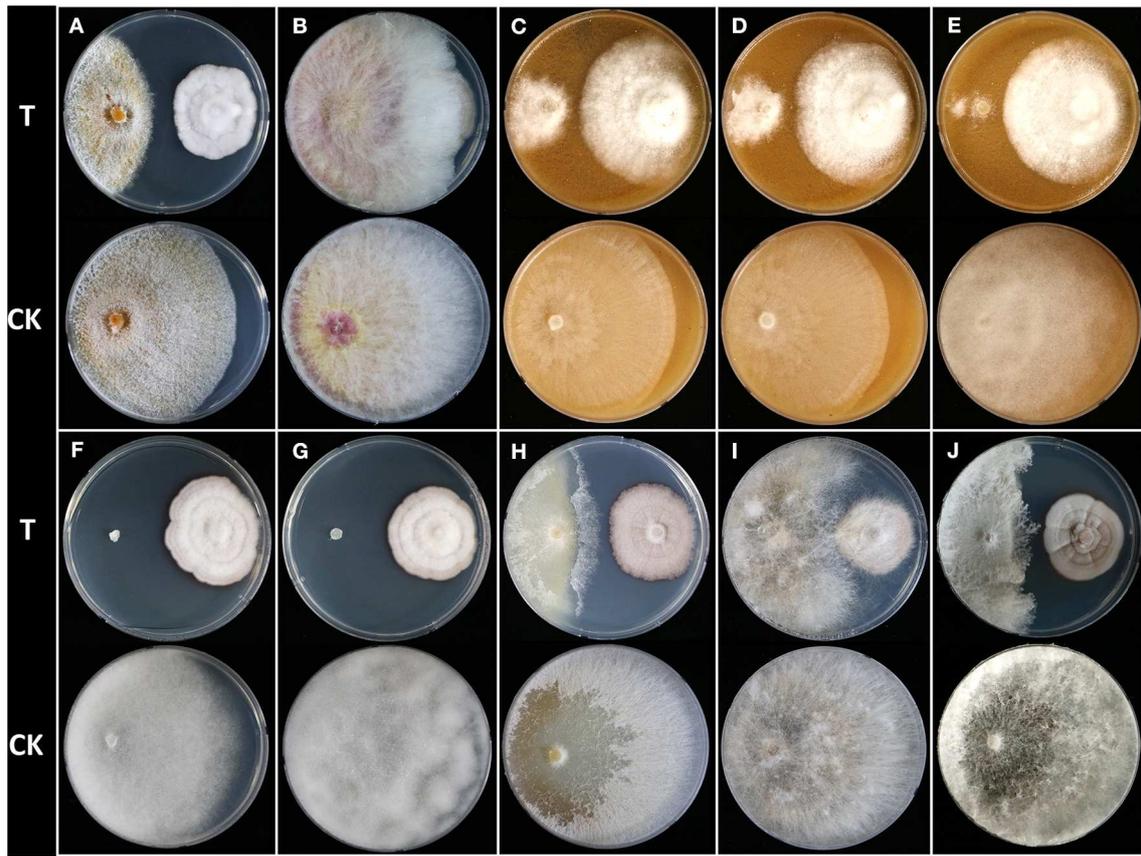

FIGURE 1 | Dual culture assay of *Humicola* sp. JS-0112 against 10 phytopathogenic fungi and oomycetes. **(A)** *Cryphonectria parasitica*, **(B)** *Fusarium graminearum*, **(C)** *Phytophthora cambivora*, **(D)** *Phytophthora cactorum*, **(E)** *Phytophthora cinnamomi*, **(F)** *Pythium graminicola*, **(G)** *Pythium ultimum*, **(H)** *Raffaelea quercus-mongolicae*, **(I)** *Rhizoctonia solani*, **(J)** *Sclerotinia homoeocarpa*; T, co-cultivation of JS-0112 with phytopathogenic fungi; CK, pathogenic fungal strains cultivated alone served as controls.

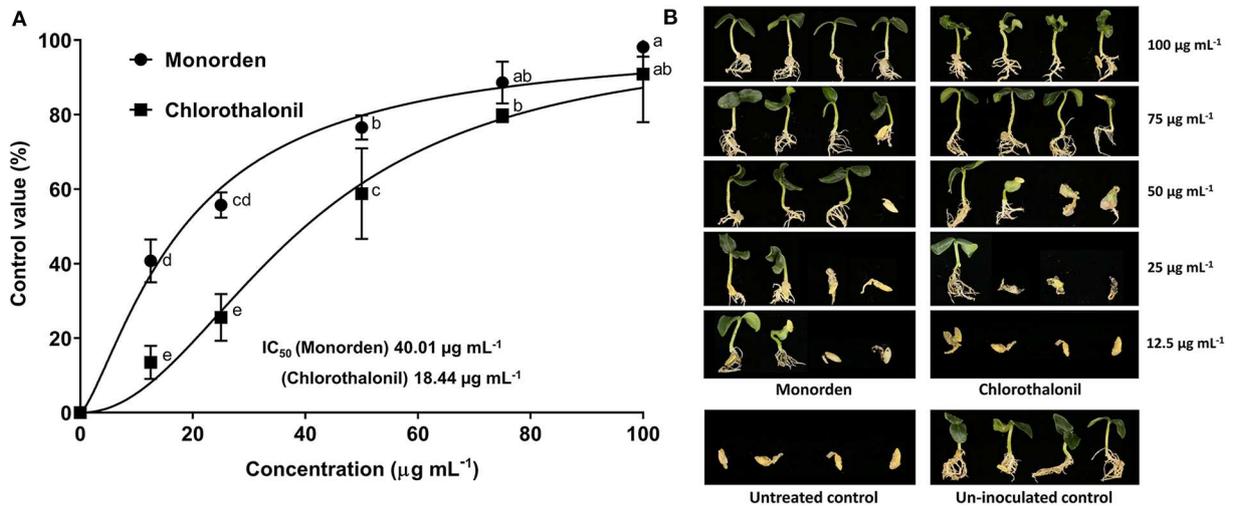

FIGURE 4 | Disease control efficacy of monorden against cucumber damping-off (CDO) caused by *Pythium ultimum*. **(A)** Dose-response curve and IC50 values in the control of CDO. Each value represents the means ± standard deviation of two runs with three replicates per run. Each replicate consisted of ten seedlings. Data from two runs were plotted using Graph Pad Prism Version 7 (Graph Pad Software Inc., San Diego, CA, United States). Different small letters indicate significant different values (Duncan's test, $p < 0.05$). **(B)** Post emergence damping-off of cucumber 7 days after inoculation.
