#### A Corrigendum on

## Loss-of-Function of a Tomato Receptor-Like Kinase Impairs Male Fertility and Induces Parthenocarpic Fruit Set

by Takei, H., Shinozaki, Y., Yano, R., Kashojiya, S., Hernould, M., Chevalier, C., et al. (2019). Front. Plant Sci. 10:403. doi: 10.3389/fpls.2019.00403

tion:

# In the original article, there were mistakes in the legends for **Figure 4** and **Supplementary Figure 7** as published.

In the first two sentences of the legend to **Figure 4**, the letters attributed to the different parts of the figure were wrong. The correct legend appears below.

The axis labels in **Supplementary Figure 7B** were incorrectly formatted and its legend contained some typographical errors. The corrected **Supplementary Figure 7** and legend appear below.

The authors apologize for these errors and state that this does not change the scientific conclusions of the article in any way. The original article has been updated.

**FIGURE 4** | Reproductive organ phenotypes in the *spff* mutant. Morphology of flower (**A**,**E**), pistil (**B**,**F**), and anthers (**C**,**G**) in WT (**A**-**C**) and *spff* (**E**-**G**) at anthesis. Histological sections of WT (**D**) and *spff* (**H**) anthers at the anthesis stage. (**I**) Pollen tube elongation from WT pollen. Red arrowheads indicate pollen tubes. (**J**) Pollen grains from the *spff* mutant, without elongation of pollen tubes. (**K**) Number of pollen grains in a microscopic field. (**L**) Germination ratio of pollen tubes. (**M**) Appearance of floral bud length of 4 mm. Longitudinal section of ovaries from 4 mm floral buds (**M**) in WT (**N**) and *spff* (**O**). Bars are 2 mm (**A**,**E**); 1 mm (**B**,**C**,**F**,**G**); 100 µm (**D**,**H**,**N**,**O**), and 50 µm (**I**,**J**). At least three biological repetitions were performed and their mean values with SE are shown. Asterisks indicate significant difference between WT and *spff* mutant (Student *t*-test,  $\rho < 0.01$ ).

Tomato eFP browser (Winter et al., 2007), at tomato plant v. Heinz 1706 organs (The Tomato Genome Consortium, 2012). (B) Expression pattern of *SPFF* in organs and inflorescence tissues of cv. Micro-Tom (Ezura et al., 2017). P1-6, pistil samples; MG, mature green fruits at 33 days after flowering; RED, red fruits at 44 days after flowering; A1-3, anther samples; DBF, days before flowering; DAF, days after flowering. *SPFF* mRNA expression pattern in fruit pericarp cell/tissue (C) and fruit tissue (D), visualized in Tomato Expression Atlas (Fernandez-Pozo et al., 2017), in cv. M82 (Shinozaki et al., 2018). DPA, days post anthesis; RPKM, reads per kilobase of exon per million mapped reads; RPM, reads per million mapped reads.
