## A Corrigendum on

### Economy of Effort or Maximum Rate of Information? Exploring Basic Principles of Articulatory Dynamics

by Xu, Y., and Prom-on, S. (2019). *Front. Psychol.* 10:2469. doi: 10.3389/fpsyg.2019.02469

In the original article, there were two errors in Equation (5). The lower limit of the summation should be  $i = 0$  rather than  $i = 1$ . The denominator in the fraction should be  $(k - i)!$  rather than  $(N - k)!$

A correction has been made to Equation (5). The corrected equation appears below.

$$c_k = \begin{cases} y(0) - b, & k = 0 \\ y^k(0) + c_0\lambda - m, & k = 1 \\ \frac{1}{k!} \left( y^k(0) - \sum_{i=0}^{k-1} \frac{k!}{(k-i)!} c_i (-\lambda)^{k-i} \right), & k \geq 2 \end{cases} \quad (5)$$

The authors apologize for this error and state that this does not change the scientific conclusions of the article in any way. The original article has been updated.
