A corrigendum on

Phenotypic characterization of idiopathic epilepsy and epilepsy of unknown cause in Irish Setters

by Plonek, M., Diaz-Espineira, M. M., Stassen, Q. E. M., Santifort, K. M., Leegwater, P. A. J., and Mandigers, P. J. J. (2022). *Front. Vet. Sci.* 9:1066094. doi: 10.3389/fvets.2022.1066094

In the published article, there was an error in [Figure 2](#) and its caption as published. Two dams were marked as affected with IE, when they did not in fact have IE and were supposed to only be marked as parents of dogs with IE.

The corrected [Figure 2](#) and its caption appear below.

In the published article, there was an error in [Table 4](#) as published. The segregation analysis should include 11 litters instead of 10 litters. The corrected [Table 4](#) and its caption appear below.

In the published article, there was an error in the main text.

A correction has been made to the section Pedigree analysis, line 181. This sentence previously stated:

“Thirteen affected dogs from 10 litters were closely related ([Figure 2](#)).”

The corrected sentence appears below:

“Thirteen affected dogs from 11 litters were closely related ([Figure 2](#)).”

A correction has been made to the section Pedigree analysis, line 184. This sentence previously stated:

“Two affected bitches produced five litters each with IE dogs, two of these litters were from the same sire.”

The sentence should be deleted.

The authors apologize for this error and state that this does not change the scientific conclusions of the article in any way. The original article has been updated.

TABLE 4 Segregation analysis of the studied affected littermates.

Litter	Affected siblings	Unaffected siblings	% Affected in litter
1	1	12	7.6%
2	0	14	0%
3	1	6	14.2%
4	1	6	14.2%
5	0	8	0%
6	1	11	8.3%
7	1	9	10%
8	1	10	9.1%
9	1	8	11.1%
10	4	7	36.3%
11	2	7	22.2%
Total affected	13	98	11.7%
